

In addition to the retractable ORIS-MATIC towbar, ORIS also offers two high-quality vertically detachable systems. The AK11 and AK40/41 towbars have been developed in close co-operation with German automotive manufacturers, meeting the most stringent demands of the industry.

Both systems have been sold for many years to a large number of automotive companies and are renowned for their user-friendliness, allowing attachment and detaching in seconds. These top-class detachable systems are completely invisible after removal, leaving the vehicle's lines undisturbed.

For a detailed overview of all ORIS and BOSAL towbars, please have a look at www.catalogue.bosal.com. For more information about the ORIS-MATIC specifically, consult www.bosal.com or www.oris-gmbh.de/Oris-Matic.

Retractable towbar

The retractable towbar - invisible in a flash

Out of sight in less than 2 seconds

The ORIS-MATIC retractable towbar is the ideal solution for the motorist who prefers to hide his towbar when not in use, but wishes to keep his hands clean while moving it out of sight. Thanks to an ingenious swivel mechanism, the ORIS-MATIC towball can very easily be hidden when not in use. With the external operating lever concealed under the bumper, the towball can be swiveled out of sight in less than 2 seconds. The result: a completely invisible towbar which requires significantly less handling than the current detachable systems.

Plug in and go

The electrical socket, cleverly integrated into the neck of the towball, also eliminates the burden of having to search under the vehicle bumper for the socket. The trailer or caravan connector can simply be plugged in once the towball is locked into position.

Effortless and quick

The ORIS-MATIC is not only easy to operate, the installation time is also similar as for conventional towbars. In some cases, a small adaptation to the vehicle's bumper may be necessary.

Safety check

Thanks to the alarm tone which sounds if the ball neck is not properly locked in position, you can always be sure of a safe drive.

Benefits:

- ✓ Comfortable, easy, clean and quick handling
- ✓ Towball, socket and operating lever completely invisible when not in use
- ✓ Same installation time as for conventional towbars
- ✓ Safety check via alarm tone
- ✓ Electrical set included, with very easy access to the socket

Who is ORIS?

ORIS is a renowned German manufacturer and supplier of vehicle parts and car accessories for both the German and the international automotive industry. ORIS was the pioneer of the retractable towbar system and was the first to supply these units directly to the production lines of the global OE manufacturers. This expertise has now also been made available for the aftermarket, where the

company has recently also launched its well-known ORIS-MATIC design.

In September 2006, the ORIS business was incorporated into BOSAL's Automotive Carrier Systems division, creating the market leader and the largest manufacturer of towbars in Europe.
